Chapter 6 Exam Questions

1. Which of the following **is not** included in the 4V features of big data?
   A. Volume
   B. Value
   C. Variety
   D. Valid
2. Fog computing is a distributed computing model that extends cloud computing concepts to network edges to support low latency and distributed applications in mobile and IoT fields. Which is false about fog computing?
   A. Fog can quickly generate big data at the edge of a network to reduce the latency.
   B. Fog computing can reduce the bandwidth consumed by the core internet and restrict the movement of data to the local network.
   C. Fog computing delivers higher network reliability and physical device security than cloud computing.
   D. Fog computing can temporarily cache data to reduce network pressure.

3. The function of IoT is only to collect the data generated by everything. **False**

4. IoT devices may be connected to the internet and can be controlled through the internet. **True**

5. The nature of IoT is the Internet. As long as hardware or products are connected to the Internet and data interactions exist, it can be called an IoT. **True**

6. Which of the following does not belong to the elements of AI?
   A. Big data
   B. Perceptual analysis capability
   C. Computing capability
   D. Scenario

7. Which of the following scenarios is AI applicable to?
   A. NLP(Neuro-Linguistic Programming)
   B. Voice recognition
   C. Companion Robot
   D. Image recognition

8. Artificial intelligence (AI) is a new science of researching and developing theories, methods, technologies, and application systems to imitate and enhance human intelligence. Which of the following statements about AI is false?
   A. AI does not have initiative and creativity peculiar to human consciousness.
   B. AI is not social.
   C. AI is an unconscious, mechanical, and physical process.
   D. AI is a technology in which objects are interconnected through the network to exchange information.

9. Single）In the OpenStack solution, which of the following modules provides persistent block storage?
A. Cinder
B. Swift
C. Nova
D. Glance

10. Single）Which of the following statements about big data and cloud computing is true?
A. Cloud computing is a broad term for data sets so large or complex that traditional data processing applications are inadequate.
B. Big data uses the pay-per-use mode, which supports available, convenient, and on-demand network access.
C. Big data can be used as a type of cloud computing service for users to choose.
D. Cloud computing cannot provide the underlying computing resources used for big data processing.

Note: In Open stack modules, you should know each module job such as in question 9.
