Chapter1: Cloud Computing Introduction

Chapter1 Exam Questions

1. Cloud Computing Deployment Models can be(multiple choices):
   - **A. Private cloud**
   - **B. Industry(Community) cloud**
   - C. Rapid cloud
   - **D. Public cloud**

2. Cloud computing is a model that enables users to obtain resources (such as computing, storage, network, applications, and services) from a shared, configurable resource pool anytime, anywhere. Resources can be quickly supplied and released, minimizing management workload and interactions among service providers.
   True
   False

3. Cloud Computing Characteristics include(multiple choices):
   - **A. On-demand self-service**
   - **B. Broad network access**
   - **C. Rapid scalability**
   - **D. Resource pooling**

4. (Single Answer) An user rents VMs from a cloud service provider for daily use and returns them when traveling. Which of the following key characteristics of cloud computing does this reflect?
   - A. On-demand self-service
   - B. Location-independent resource pool
   - **C. Pay per use**
   - D. Elasticity

5. (Multiple Answer) Which of the following are cloud computing deployment modes?
   - **A. Public cloud**
   - **B. Private cloud**
   - C. E-Government Cloud
   - **D. Hybrid cloud**

6. (single choice) Which of the following statements about hybrid clouds is **incorrect**?

   A. They centrally manage enterprises' resources on both public and private clouds.
   B. They allow service applications to move seamlessly between public and private clouds.
   C. They leverage both public and private cloud advantages to optimize resource configuration.
   D. Applications can be deployed only on the public cloud

7. (T or F)Hybrid cloud is a deployment mode that integrates features of the public cloud and private cloud. The **industry cloud is a form of hybrid cloud**. **False**

8. (Single-Answer Question) Which of the following components does not belong to the FusionSphere virtualization suite?
   A. FusionCompute
   B. FusionManager
   C. OceanStor BCManager eBackup
   D. OpenStack

9. (Single Answer) Which of the following cloud service model deals with providing storage, network, servers and virtualization of resources?
   A. Software As A Service (SaaS).
   B. Platform As A Service (PaaS)
   C. Infrastructure As A Service (IaaS).
   D. Storage As A Service.

10. Which of the following protocols requires certificates?(single choice)
    A. TCP
    B. UDP
    C. HTTP
    D. **HTTPS**

11. (T or F) the measurable service feature of cloud computing refers to charging based on time and usage. **False**

12. Cloud computing is a product of Internet and computing technologies development. Therefore, cloud computing is indispensable of network connections.
    True

13. Which of the following is true about the resource pooling feature of cloud computing?

A. The resource pooling feature of cloud computing shields the differences between resources of the same type.

B. The resource pooling feature of cloud computing allows CPUs and disks to be added to the same resource pool.

C. The resource pooling feature of cloud computing is the prerequisite for the ubiquitous network access feature.

D. The resource pooling feature of cloud computing depends on the virtualization technology.

14. The cloud services purchased by a user include an application **running environment,** but do not contain any application or related data. This mode is ( ).

A. IaaS

B. PaaS

C. SaaS

D. NaaS

15. Which of the following are true about the cloud computing deployment modes?

A. The private cloud is deployed on the premises of enterprises and used by internal employees.

B. The public cloud is generally constructed by carriers or cloud service providers. It sells or leases services to the public.

C. The industry cloud generally have attributes of a certain industry, which is a "large private cloud" or "small public cloud".

D. The hybrid cloud is generally constructed by carriers or cloud service providers. It integrates the features of the public cloud and private cloud. It sells or leases services to the public.

16. (Single） Which of the following is **true** about the on-demand self-service feature of cloud computing?

A. Users do not need to communicate with service providers at all when using cloud-computing resources.

B. After determining the required cloud computing services, users can apply for cloud computing resources by themselves.

C. The cloud computing service providers only need to prepare the cloud services and users will complete the remaining process all by themselves.

D. When using cloud-computing resources, users need to solve all problems by themselves.

17. (Single） There are many milestone events in the development of the Internet. Which of the following is true about the time sequence of the milestone events?

A. Establishment of the TCP/IP protocol ---> Birth of ARPANET ---> "www" officially open to the public ---> Birth of DNS

B. Birth of DNS ---> Establishment of the TCP/IP protocol ---> Birth of ARPANET ---> "www" officially open to the public

C. "www" officially open to the public ---> Birth of DNS ---> Establishment of the TCP/IP protocol ---> Birth of ARPANET

D. Birth of ARPANET ---> Establishment of the TCP/IP protocol ---> Birth of DNS ---> "www" officially open to the public

18. (multiple)Which of the following are **true** about the **ubiquitous network access** feature of cloud computing?

A. with network connection, users can access to cloud from different terminals

B. with network connection, users can access to cloud from different places.

C. with network connection, users can use cloud resources at any time.

D. with network connection, users can view cloud resource status at any time.

19. Which of the following is SaaS mode of Huawei cloud?

A. Facial recognition
B. ECS
C. EVS
D. OBS

20. Which of the following devices **cannot be** used to set a boundary between public and private cloud, in the hybrid cloud solution?

A. Virtual switch
B. Core switch
C. Traffic cleaning device
D. Firewall

21. Which is the difference between public and private cloud?
    A. **Public cloud is open to public, but private used within specific users.**
    B. Public has industry attribute but private does not.
    C. Private has industry attribute but public does not.
    D. Public cloud service need to be payed for but private is free services.

22. Which of the following **doesn't** reflect the self-service feature of cloud computing?
    A. **The client receives an SMS notification before a month from service expiring.**
    B. The client purchased a server by him/her self.
    C. The client can install its own OS on the purchased cloud server such ECS.
    D. The client purchased a server by him/her self.

23. Cloud computing quantifiable services refer to charging customers based on usage time and usage.
    A. **TRUE**
    B. FALSE

24. In Huawei FusionCompute, the cluster resources consist of the host and its associated storage and network resources
    A. **TRUE**
    B. FALSE

25. Cloud computing is a product of parallel computing, grid computing and distributed computing. Which of the following is **true** about their relationship?
    A. Distributed computing completely replaces grid computing
    B. Grid computing completely replaces parallel computing
    C. **Parallel computing, grid computing, and Distributed computing all belongs to cloud computing.**
    D. Cloud computing is a type of distributed computing

26. In cloud computing, hardware of the same type and different models can form a resource pool. **True**

27. On Huawei cloud, applying to ECS with only an OS installed on it, this service mode is?
    A. **IaaS**
    B. PaaS
    C. SaaS
    D. NaaS

28. A user applies for an ECS on HUAWEI Cloud, which of the following about ECS are true?

A. The OS of the ECS can be provided by HUAWEI Cloud or created by the user.

B. You can log in to the ECS through a PC or a mobile Phone

C. If an IP address is configured for ECS, the service mode is PasS. Otherwise, the service mode is IaaS

D. Running the ECS requires the local hardware resources of the user.

29. Cloud computing is the product of the development of the Internet and computing technology, so cloud computing must be inseparable from the network.

A. TRUE

B. FALSE

30. The following description about cloud computing is correct

A. Cloud computing is a technology that enables IT resources to be obtained anytime, anywhere, conveniently, and on demand.

B. Various IT resources in cloud computing need to be paid to use.

C. IT resources acquired in cloud computing can only be used through the network

D. In the process of acquiring IT resources, users need to repeatedly negotiate with cloud computing service providers.

31. In cloud computing, different types of hardware of the same type can form a resource pool.

A.TRUE

B. FALSE

32. The following description of cloud computing resource pooling features is correct.

A. The cloud computing resource pooling feature is a prerequisite for achieving extensive network access

B. Cloud computing resource pooling feature can put CPU and hard disk into the same resource pool.

C. **Cloud computing resource pooling feature can shield the difference between similar resources.**

D. Cloud computing resource pooling features must rely on virtualization technology to achieve.

33. Where did the user apply for a cloud hard drive on Huawei's public cloud? This service model belongs to A

A. IaaS

B. DaaS

C. PaaS

D. SaaS

34. Among the following options, the description of cloud computing **on-demand self-service features is correct.**

A. The cloud computing service provider only needs to prepare all the services, and the remaining work is completely completed by the user.

B. In the process of using cloud computing, users need to solve all problems themselves.

C. **After the user determines the cloud computing service he needs, he can complete the application of cloud computing resources by himself.**

D. When using cloud computing resources, users do not need to explain to the service provider at all

35. The cloud service purchased by the user contains the application running environment, but there is no application and related data. This mode

The formula belongs to (B)

A .SaaS

B . PaaS

C . NaaS

D . IaaS

36. The following options are characteristic of the era of cloud computing 1.0 (multiple choices)

A. Agile application development and life cycle management

B. Focus on virtualization products

C. Resource service standardization and automation

D. Use virtualization technology to improve resource utilization

37. The following options **cannot reflect** the characteristics of cloud computing on-demand self-service.

The engineer purchased a cloud server from Huawei's public cloud according to his own needs

B. The engineer upgrades the cloud server CPU he purchased from 2 to 4.

C. The engineer changes the operating system of the cloud server he purchased from Linux to Windows

D. The engineer received a notification message from the server provider one week before the expiration of the cloud server.

38. The correct description of the broad network access characteristics of cloud computing is (). [Multiple choices] ABCD

A. Through the network, users can use self-purchased cloud computing resources through different terminals

B. Through the network, users can use self-purchased cloud computing resources at any time

C. Through the network, users can view the status of self-purchased cloud computing resources at any time

D. Through the network, users can use self-purchased cloud computing resources in different locations
