Chapter 3 Network exam questions

1. (Single-Answer Question) Which of the following ports is added when you configure uplinks on FusionCompute?
   **A. Aggregation port**
   B. Storage network port
   C. BMC network port
   D. Port group

2. (True or False) On FusionCompute, a VM NIC can be added to only one security group.
   **A. TRUE**
   B. FALSE

3. (Single Answer) It provides connection between sets of nodes and allows the connected devices(nodes) to communicate with each other **but it is not a device**. Which of the following fits the above description?
   A. Host.
   **B. Network.**
   C. Storage Array.
   D. Switch.

4. A VM can have multiple virtual NICs, which correspond to different virtual switches.
   **True**

5. In Huawei FusionCompute, a DVS can be configured with static routes and multiple types of dynamic routes.
   **False**

6. Which of the following technologies or devices **cannot isolate broadcast** domains?
   A. VLAN
   **B. Hub**
   C. Router
   D. Firewall

7. In KVM, there are two methods for connecting VM NICs to a physical network.
   A. Bridge connection and direct connection
   **B. Bridge connection and address translation correct**
   C. Address translation and passthrough
   D. Passthrough and bridge connection

8. On a physical network, which of the following devices supports **route forwarding** requests?
   A. Physical server NIC
   B. Hub
   C. Layer 2 switch
   **D. Router**

9. **North/South traffic can be.**

   **A. Traffic generated when customers access services in a data center through the internet.**
   **B. Traffic generated by mutual access between VM's across data centers.**

10. East/West traffic can be.
    **a. Traffic between VMS in the same data center.**
    **b. Traffic generated during VM live migration.**

11. (Multiple) In Huawei FusionCompute, which of the following are true about the relationship about quantities of VMs and DVSs?
    A. If a VM has multiple NICs, each NIC can be associated with a DVS.
    B. If a VM has multiple NICs, multiple NICs can be associated with the same DVS.
    C. If a VM has one NIC, the NIC can be associated with only one DVS.
    D. If a VM has one NIC, the NIC can be associated with multiple DVSs.

12. (Multiple) The physical switch remote management methods are:

    **a. Telnet**
    **b. SSH**
    c. **Web**

13. （Single）Which of the following operations for creating port groups in Huawei FusionCompute is false?
    A. Set the name of the port group to "test".
    B. Set the port type to Common.
    **C. Set the VLAN ID to 5000.**
    D. Enter "This is a test port." in the description.

14. （multiple）In Huawei FusionCompute, the VLAN ID of a port group is set to 10, which indicates ( ).
    A. **The system will untag the data frames with the VLAN 10 tag that pass through the port group and then forward the data frames.**

    B. **The system will add the VLAN 10 tag to the data frames without a VLAN tag that pass through the port group and then forward the data frames.**

    C. **The system will discard the data frames with a tag other than VLAN 10 that pass through the port group.**

    D. The system will change the tag of data frames with a non-VLAN-10 tag that pass through the port group to VLAN 10 and then forward the data frames.

**15.** In Huawei FusionCompute, the VLAN ID configured for a DVS must exist on the physical switch to make VM communication normal. **(True)**

16. Which is false about VLAN?
    **A. VLAN increases the interface bandwidth of physical switch.**
    B. VLAN enhance NW security
    C. Vlan improve network robustness
    D. Vlan isolate broadcast domains

17. （T or **F**）In Huawei FusionCompute, a management IP address must be configured for each DVS to facilitate unified management of DVSs.

18. （**T** or F）If a security group is deleted, the rules in the security group will be deleted as well.

19. （Single）Which of the following technologies can increase the link rate on a switch?
    A. VLAN
    B. VxLAN
    **C. LACP**
    D. LDAP

20. If two vms run on different physical server they communicate through:
    a. Virtual NIC
    b. Virtual switch
    c. Physical switch
    **d. Physical NIC**

**21. VMs in different VLAN's can use the same IP address, no IP address conflict occurs.**
**True**

**22.** In Huawei FusionCompute **,Virtual switches are belong to:**
    **a. Access ,layer2 switch**
    **b. Core switch**
    **c. Aggregation switch**

**23.** In Huawei FusionCompute, which is **true** about virtual NIC?
    **a. Virtual NIC Mac and IP addresses can be manually configured**.
    **b.** Virtual NIC doesn't need MAC address
    **c.** The IP of virtual NIC must manually configured
    d. Virtual NIC Mac and IP addresses are automatically configured by VRM

24. Port group types are:
    **a. Common**
    **b. Trunk**
    c. Access
    d. Aggregation

25. Which is mandatory to allow VM to communicate with other VM?
    a. **Add at least one NIC for the VM**
    b. Connect VM physical server to internet
    c. Configure port binding on server
    d. Configure port binding on switch

**26. If 2 VMs can ping each other, which device will certainly be used?**
    a. Virtual server
    b. Physical NIC
    c. Physical server
    d. **Virtual NIC**

**27. If 2 VMs can ping each other, this indicates?**
    a. **Both VM's are configured with correct IP address**
    b. They run on the same host
    c. They use the same network segment
    d. They use different network segment

**28.** Each port of multiple virtual ports in Huawei FusionCompute DVS has its own attributes**. True**

**29.** In Huawei FusionCompute,the admin can view the DVS ports connected to VMs. **False**

30. The prerequisite for the communication between VMS are:
    A. **Configure correct IP address to VMs**
    B. **Configure correct MAC address to VMS**

**31.** In Huawei FusionCompute, the management VLAN ID cannot be changed. **False**

32. If some tools installed on the VM, you can set it IP address to 0.0.0.0 **True**

33. Which of the following about security group are true?

A. **Security group similar to a firewall, is used to set network access control for a single or multiple VMs. It is an important security isolation method.**
B. **A security group is a logical group.**
C. **Security groups are used to protect VM security.**
D. When a VM is created, a security group is generated at the same time.

34. In Huawei FusionCompute which of the following about security groups and rules is false?
    A. A security group must be created before rules can be added.
    B. Only security group that has no VM can be deleted.
    C. **The changes to security group rules can only be manually applied to VMs in the security group.**
    D. By default, a security group rejects all access requests before rules are added to it.

35. Which of the following statement about application scenarios of security groups is false?

A. Security group rules can be configured to prohibit VMs from accessing the FTP server.
B. Security group rules can be configured to allow only the specified IP addresses to remotely log in to VMs.
C. Security group rules can be configured to disallow access to VMs.
**D. Security group rules can be configured to control the permissions on folders in a VM.**

36. In Huawei FusionCompute, which of the following statements about security group **rules** is false?
A. A security group is essentially a set of rules.
B. All VM NICs in the same security group use this security group rule for access control.
**C. VMs can communicates with external networks only after a security group is created for the VMs and rules are added to the security group.**
D. If a VM has multiple NICs, a security group can be configured for each NIC.

37. In Huawei FusionCompute, which of the following statements about **deleting** security group is false?
**A. A security group can be deleted properly even if it is authorized to access other security groups.**
B. The security group to be deleted cannot contain any VMs. If a VM exists in the security group, the VM must be removed from the security group before the security group can be deleted.
C. After a security group is deleted , all security group rules in the group will be deleted as well.
D. When a security group to which a VM belongs is deleted, the effects of other security groups on this VM(if it has multiple NIC) are not changed.

38. In FusionCompute ,all VM NICs added to the same security group are filtered by the rules of this security group. To improve security, a NIC must be added to multiple security groups. **False**

39. In FusionCompute, virtual switches connect to a physical network using.
**A. Uplink**
B. Port group
C. Virtual NIC
D. iNIC

40. In FusionCompute, which is **false** about the uplink links?
**A. The uplink is between the DVS and physical NIC of the host. One host has only one uplink.**
B. An uplink can correspond to one physical network port or the logical port that binds multiple physical network ports.
C. Multiple DVSs cannot share an uplink.

D. A host can has multiple uplinks connected to different DVSs.

41. In cloud computing there are virtual networks and physical networks. **True**

42. In Huawei FusionCompute, if there are just few NICs on the server, multiple planes can be co-deployed and logically isolated by using VLANs. **True**

43. Switches are classified as access switches, aggregation switches, and core switches. Virtual switches belong to **aggregation** switches. **False**

44. Which of the following about the difference between physical and virtual switches is **false**?

A. Virtual switches run on physical servers, while physical switches have independent hardware.

**B. Virtual switches cannot perform operations on VLAN tags, while physical switches can perform operations on VLAN tags.**

C. Virtual switches cannot be configured with layer 3 interfaces, while physical switches can be configured with layer 3 interfaces

D. The normal running of virtual switches requires certain hardware resources

45. In FusionCompute, which of the following operations can take effect immediately?

**A. Deleting NIC**

B. Installing tools

C. Reducing disk capacity

D. Directly reading and writing data on a newly attached disk.

46. In Huawei FusionCompute,the VLAN ID of a port group is set to 0, which indicates().

A. The vlan tag of data frames that pass through the port group will be set to 0.

B. Only data frames with the VLAN 0 tag can pass through the port group

C. Data frames with vlan tag are not allowed to pass through the port group.

**D. The data frames that pass through the port group will not be modified**

47. In Huawei FusionCompute, the **gateway** address is set to which of the following devices?

**A. Layer 3 switch**

B. Layer 2 switch

C. Virtual switch

D. Layer1 physical device

48. In Huawei FusionCompute, the uplink is used to().

A. Assign IP address to VM

B. Manage MAC address of VM

**C. Connect virtual network to physical network**

D. Check the status of vNICs.

49. Which of the following is true about Huawei virtual switches?

A. They are called vSwitch

**B. If a Huawei distributed switch has multiple virtual ports, each port has its own attributes.**

C. Huawei virtual switches are classified as standard virtual switches and distributed virtual switches
D. The virtual switching function of an iNIC is provided by Huawei virtual switches.

50. In Huawei FusionCompute, the virtual NICs of Vm are connected to the ports of virtual switch. To facilitate simultaneous configuration and management of multiple ports, the ports with the same network attributes are added to the same port group. **True**

51. In Huawei FusionCompute, if only one physical network port is in a bound port, the physical network port cannot be removed directly. **True**

52. What a network device does a DVS correspond to?
A. Router
B. Layers 3 switch
**C. Layer2 switch**
D. Hub

53. Virtual switches are indispensable to successful communications between VMs. **False**

54. Which of is false about port groups and security groups?
A. One DVS can have multiple port groups. One VM can be protected by multiple security group.
**B. Security groups protect VMs based on port groups.**
C. A port group is an aggregation of virtual ports on a DVS. A security group is a set of rules.
D. A VM NIC is connected to a virtual port in a port group. A VM NIC is associated with a security group.

55. In Huawei FusionCompute, common NICs can be bound in ( ) modes.
**A. Active/Standby**
**B. Load sharing based on round-robin**
**C. Load sharing based on source and destination MAC addresses**
D. Load sharing based on source and destination port groups

56. Data packets in a cloud computing virtual network must be routed and forwarded by router in a physical network. **False**

57. Which about port group are true?
A. One port group can be configured with multiple IP address
B. A port group functions as distributed virtual switch
**C. All virtual ports in a port group have the same attributes**
**D. There are two types of port groups: common and trunk port groups**

58. The port configuration of Huawei switch is as follow:
Port link-type **trunk**
Port trunk allow-pass
vlan 16  17

Which of the following is **true** based on the preceding configuration?

A. Data frames with the VLAN 16 tag will be untagged and forwarded when passing through this port.
**B. Data frames with the VLAN 17 tag will be forwarded with the tag retained when passing through this port.**
C. Data frames without any tags will be discarded when passing through this port.
D. Data frames without any tags will be tagged with VLAN 16 or VLAN 17 when passing through this port and then forwarded.

59. The port configuration of Huawei switch is as follow:
Port link-type **access**
Port default vlan 16

Which of the following is **true** based on the preceding configuration?

A. This port doesn't perform any operation on the data frames that pass through it.
**B. This port removes the VLAN 16 tag from the data frames and forward the data frames.**
C. This port adds the VLAN 16 tag to the data frames that pass through it.
D. This port allows **only** the data frames with the VLAN 16 to pass through

60. Which can be performed under the VLAN Pool menu in FusionCompute?

A. Add ten VLAN pools with the same VLAN ID to the same DVS.
**B. Add one VLAN pool to the DVS and set the start VLAN ID of the VLAN to 100.**
C. Add one VLAN pool to the DVS and set the start VLAN ID of the VLAN to 0.
D. Add one VLAN pool to the DVS and set the end VLAN ID of the VLAN to 4096.
