Data Visualization

Line Charts

```
import pandas as pd
import numpy as np
fifa_data = pd.read_csv("C:\\fifa_ranking2.csv", index_col="Date",parse_dates=True)
print (fifa_data)
# index_col: Column to use as the row label of the DataFrame
print (fifa_data.head())

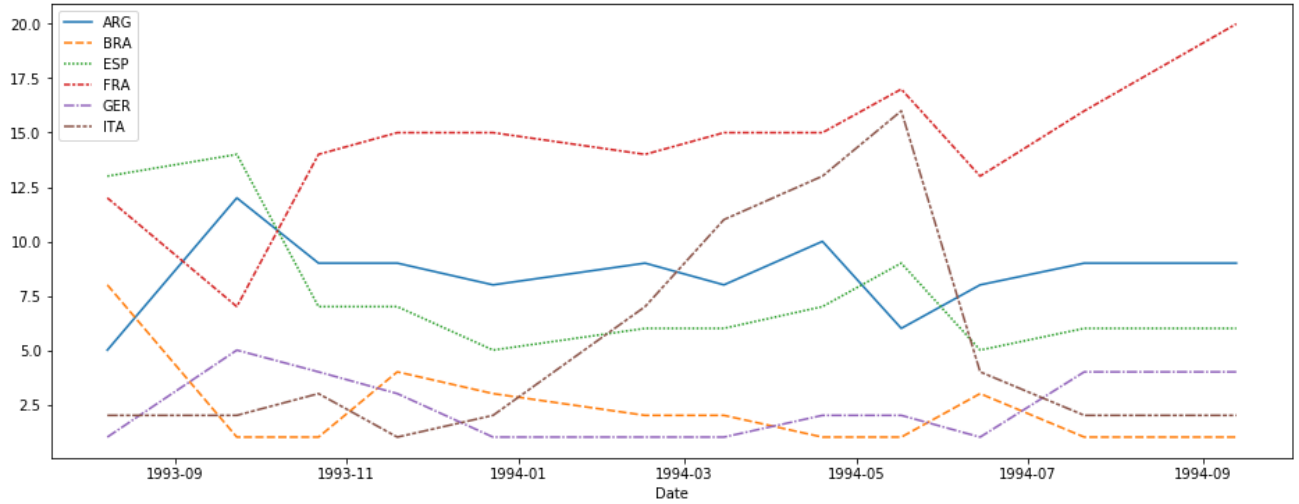

import matplotlib.pyplot as plt
# Set the width and height of the figure
plt.figure(figsize=(16,6))

import seaborn as sns
# Line chart showing how FIFA rankings evolved over time
sns.lineplot(data=fifa_data)
print (fifa_data)
```

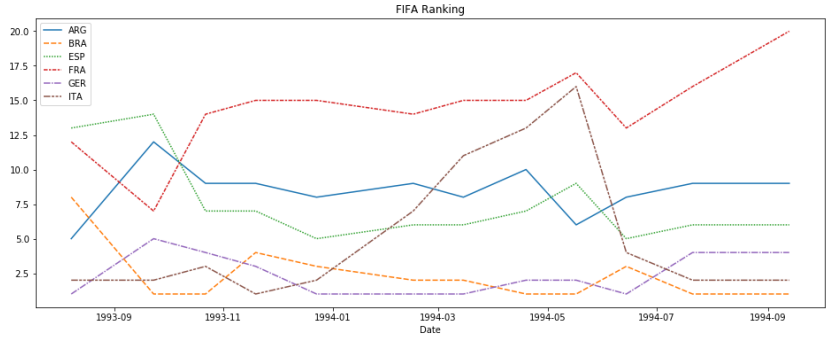

Without parse dates

https://pandas.pydata.org/pandas-docs/stable/reference/api/pandas.read_csv.html

plt.title("FIFA Ranking")

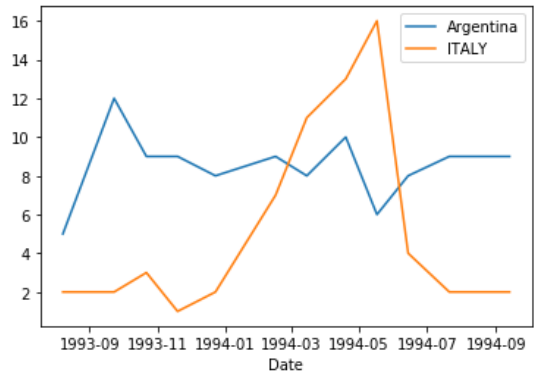

\\\\\\\\\\\\\\\\\\\\\\\\\\

list(fifa_data.columns)

sns.lineplot(data=fifa_data['ARG'], label="Argentina")

sns.lineplot(data=fifa_data['ITA'], label="ITALY")

plt.xlabel("Date")

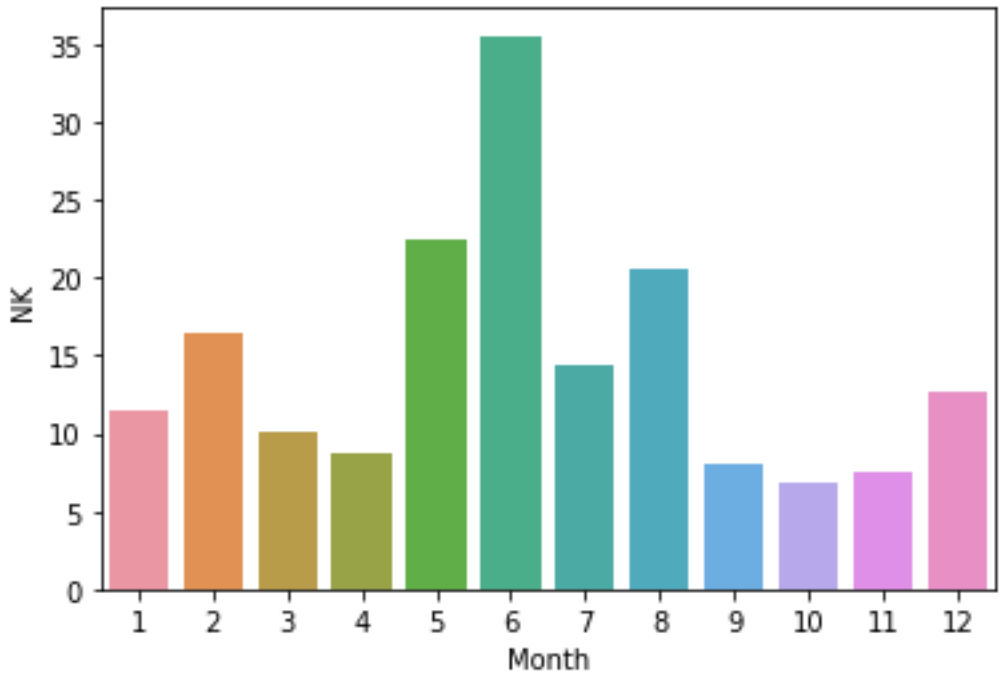

Bar Charts and Heatmaps

```
# Read the file into a variable flight_data
flight_data = pd.read_csv("C:\\datasets_116573_334386_flight_delays.csv", index_col="Month")
# Set the width and height of the figure
plt.figure(figsize=(10,6))

# Add title
plt.title("Average Arrival Delay for Airlines Flights, by Month")

# Bar chart showing average arrival delay for Spirit Airlines flights by month
sns.barplot(x=flight_data.index, y=flight_data['NK'])
```

Add label for vertical axis

plt.ylabel("Arrival delay (in minutes)")

///////

Set the width and height of the figure

plt.figure(figsize=(14,7))
